DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Farmer (2,497,301).

Farmer discloses a hair warming sheet 11 having heating parts in the center and a margin around the heating parts 24, 25. The sheet is wrapped around a user's head and secured with a tie 28, 29,31 (see Figs. 1 and 3). The device is used in a heat treatment method wherein a portion of the user's hair is exposed near the roots (apparent in Fig. 3).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farmer (2,497,301).

Art Unit: 3732

Farmer discloses the claimed invention except for the treatment preparation. However, it would have been obvious to one of ordinary skill in the art to provide an oily compound and an organic acid since these are ingredients commonly found in ordinary conditioners. Since it is very common and well-known to use conditioners to treat hair, these materials would inherently play at least a small part in any subsequent heat treatment process, as with the device of Farmer. It would have been further obvious to provide a conditioner having a pH of 2 to 4.5 and an emulsified state broken at 55 to 60 degrees Celsius, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
